LANDSCAPING APPLICATIONS

COMMUNITY PATHWAYS

Walkways families actually use – firm underfoot in every season, stroller- and wheelchair-friendly, at a fraction of the cost of concrete. Maxabase locks the fill in place so the path never ruts, never washes out, never cracks or boils in spring. For towns, parks and developments, that means big savings up front and almost nothing spent on maintenance after.

PARKS • TOWNS • DEVELOPMENTS

SHED FLOORS

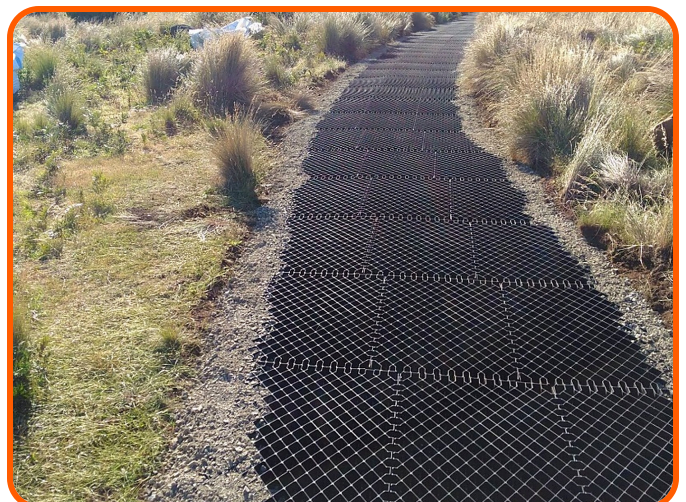

A fraction of the cost of a concrete pad, with serious muscle underneath. Rated to carry hundreds of tonnes per square metre when filled, Maxabase handles parked equipment, trailers and vehicles without breaking a sweat. The interlocking panels go down fast – and if you ever relocate the shed, the floor comes with you.

WORKSHOPS • STORAGE • EQUIPMENT

BIKE & WALKING TRAILS

Soft spots, drainage trouble and constant wear are what kill a trail. Maxabase is the cost-effective fix: it firms up problem sections, sheds water and stands up to relentless traffic. On steep, erosion-prone slopes it anchors the soil and works alongside turf and other erosion-control products to keep your trail open year-round.

TRAILS • SLOPES • EROSION CONTROL

MAXABASE SOLID GRID TECHNOLOGY RECREATION & PARKING

BOAT RAMPS & LAUNCHES

Traction and support exactly where you need it – right at the waterline. Maxabase gives trailers and tow vehicles a grippy, stable launch surface, so you never have to worry about slipping or getting bogged down. Panels are reusable and relocatable, so your ideal entry point can move with you.

GRIP • REUSABLE • RELOCATABLE

GOLF COURSES & TURF

A water-permeable surface that protects grass instead of replacing it. Seed the grid for reinforced turf on cart paths and high-traffic zones, or fill it with gravel for a free-draining service route. Either way erosion stops, and your greenkeeping crew spends less time on repairs – and less of your budget.

CART PATHS • REINFORCED TURF

CAR PARKS

Parking that looks sharp, drains naturally and lasts. Maxabase lays down quickly with no formwork, creating a durable, environmentally friendly lot that will not crack, heave or pothole the way concrete and paving do over time. Economical to build, nearly free to maintain.

NO FORMWORK • FREE-DRAINING

DRAINS & TRENCHES

Deep drains and trenches stay intact because the grid carries the structure. Water flows straight through Maxabase without scouring the drain walls, while the cell structure supports plant roots and keeps the whole channel stable. Drainage that maintains itself.

FREE-FLOWING • SELF-STABILIZING

DRIVEWAYS & YARD ROADS

Used as a top surface, Maxabase shuts down potholes, corrugation and edge erosion before they start. It will not crack like concrete and will not boil like a gravel road in spring thaw. That means no grader, no downtime, and a serious cut in labour and machinery costs – with a driveway that performs through freeze-up, melt and harvest traffic alike.

NO GRADER • NO POTHOLES

CONCRETE PADS & CARPORTS

Slash concrete costs by up to 60%. Used as the reinforcement structure under a carport or driveway pour, Maxabase needs a concrete depth of only 2 inches to hit a certified 25 MPa compression strength – huge savings on material and labour without giving up an inch of performance.

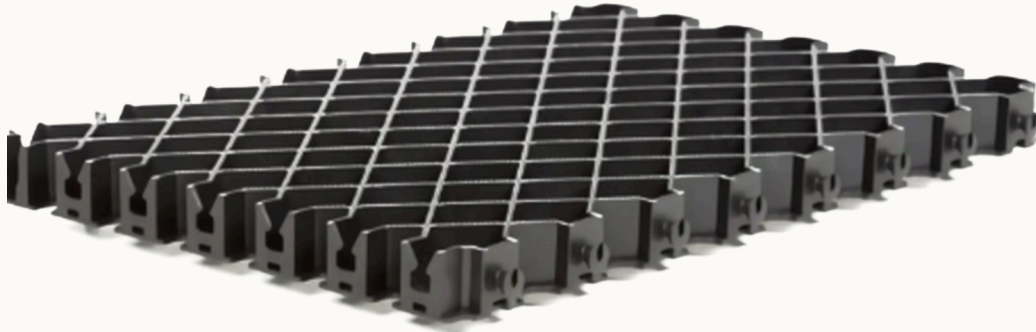

UP TO 60% LESS CONCRETE

WHAT MAXABASE DOES FOR YOUR GROUND

- ◆ Stops natural surfaces from turning to mud in wet weather
- ◆ Will not crack like concrete or boil like gravel in spring
- ◆ Eliminates erosion, potholes and corrugation for good
- ◆ Reinforces turf and protects root systems under traffic
- ◆ Locks gravel in place and stabilizes embankments
- ◆ Free-draining when gravel-filled – water goes through, not around
- ◆ Interlocking panels install fast – no forms, no cure time, no waiting

THE HONEST COMPARISON WHY MAXABASE WINS

	MAXABASE	POURED CONCRETE	GRAVEL ALONE
UPFRONT COST	✓Low	High	Low
READY FOR TRAFFIC	✓Same day	7–28 day cure	Same day
POTHoles & RUTTING	✓Never	Cracks over time	Constant regrading
DRAINAGE	✓Free-draining	Runoff & pooling	Washes out
MANITOBA FREEZE / THAW	✓No cracks, no boils	Cracks & spalls	Frost boils & ruts
RELOCATABLE	✓Unlock & move it	Never	No
ONGOING MAINTENANCE	✓Virtually none	Crack & joint repair	Yearly top-ups
ENVIRONMENTAL	✓100% recycled, permeable	High-carbon pour	Erosion & runoff

INSTALLED IN THREE STEPS. DRIVE ON IT THE SAME DAY.

1 LEVEL & COMPACT

Strip topsoil, level the base and compact. No forms, no rebar, no engineering drawings.

2 LAY & LOCK PANELS

Panels click together by hand over geotextile. A two-man crew covers hundreds of square feet an hour.

3 FILL & GO

Fill with gravel, soil or seed and compact. Full load capacity immediately – zero cure time.

FOR SOLID GROUND, ANYWHERE

ABOUT MAXABASE

Maxabase Solid Grid Technology is the surface-stabilization system trusted to cut the cost of roads, shed floors, parking and every other area where vehicles and people need solid footing — rain or shine, spring thaw or harvest rush.

A Maxabase surface is solid, dry and secure under constant use and heavy rainfall. With a filled load-bearing capacity of over **1,000 tonnes per square metre**, the grid will not wear through — period. From farmyards and landscaping to mining and civil works, Maxabase replaces the endless cycle of grading, gravelling and repairing with a surface you install once and forget.

Manufactured from **100% recycled polypropylene** in ISO 9001 certified plants, every panel is as good for the ground around it as the ground under it.

WHY BUY IT FROM WE BUILD YOUR SHOP?

- ◆ One crew, one contract — we supply the grid, prep the ground and install it right.
- ◆ We know MB / SK / AB ground and winters firsthand. Frost heave is not a surprise to us.
- ◆ Pairs perfectly with your post-frame or steel building — floor and shop from one builder.
